

1

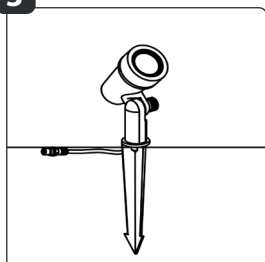

First, check if all parts are present.

2

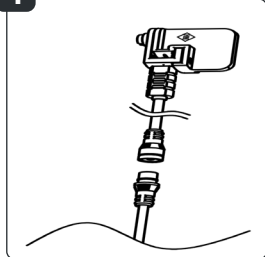

Screw the spike onto the fixture. Note: Place the cable in the groove of the spike.

3

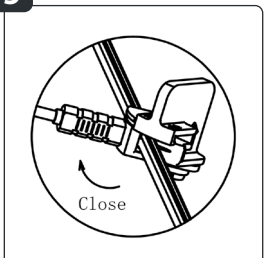

Push the spike into the ground at the desired location.

4

Now, connect the coupling piece of the spike light to the product cable connector.

5

Attach the product connector to the 12-volt main cable and tighten the connector onto the main cable.

Your lighting is now ready for use.
