

1

First, check if all parts are present.

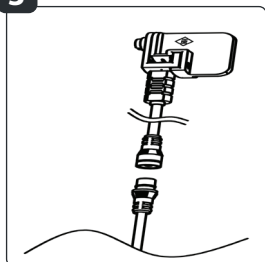

2

Without the mounting tube: drill a hole with a diameter of 40 mm at the desired location and insert the ground light into the hole.

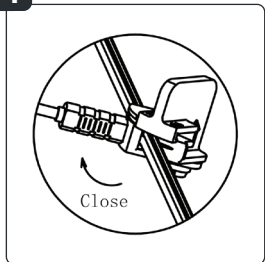

With the mounting tube: drill a hole with a diameter of 44 mm at the desired location and insert the ground light into the hole.

3

Now, connect the coupling piece of the ground light to the product cable connector.

4

Place the 12-volt main cable between the product cable connector and snap the connector onto the main cable. Your lighting is now ready for use.
