

1

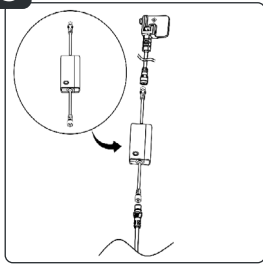

First, check that all parts are present. To connect the lighting, you will also need a push dimmer (not included as standard, but necessary for use).

2

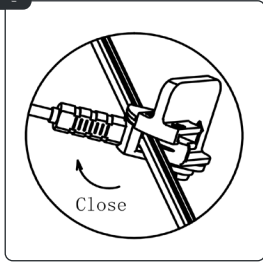

Position the strip in the desired location. If necessary, the strip can be shortened as required. Seal the shortened end with the supplied end cap.

3

Now connect the connector on the strip to the push dimmer. Then connect the push dimmer to the connector on the product cable.

4

Click the connector product cable onto the main cable. Your lighting is now ready for use.
