

1

First, check if all parts are present.

2

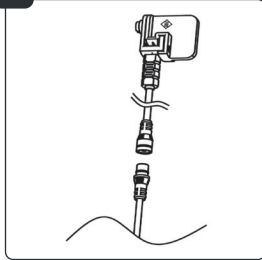

Unscrew the screw located at the top of the wall-mounted fixture and separate the fixture. Attach the fixture to the wall using the 4 included screws. Then, screw the other side of the fixture onto the wall light and connect the wiring coming from the wall to the cable of the wall light.

3

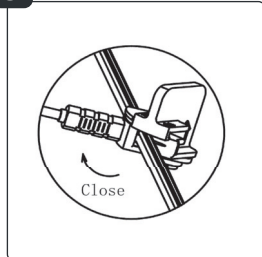

Secure the wall light to the fixture by screwing in the screw at the top.

4

Connect the coupling piece of the wall light (or the 12-volt extension cable) to the product cable connector.

5

Now insert the 12-volt main cable between the product cable connector and click the connector securely onto the main cable.

Your lighting is now ready for use.
