

1

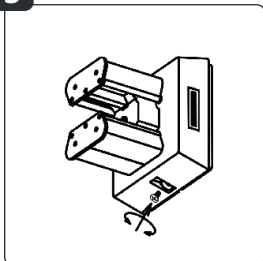

First, check if all parts are present.

2

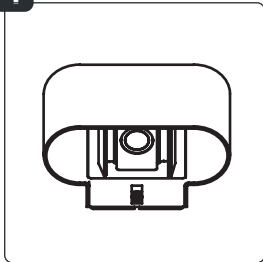

Unscrew the screw located at the bottom of the wall-mounted fixture and separate the fixture. Attach the fixture to the wall using the 4 included screws. Then, reattach the other side of the fixture to the part that is mounted on the wall.

3

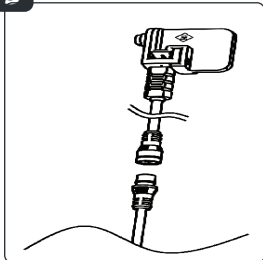

Secure the fixture by tightening the screw at the bottom.

4

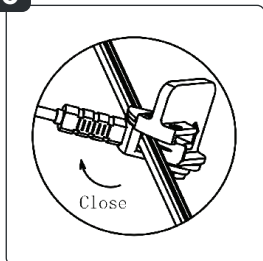

Now place the cover onto the fixture.

5

Connect the coupling piece of the wall light (or the 12-volt extension cable) to the product cable connector.

6

Now insert the 12-volt main cable between the product cable connector and click the connector securely onto the main cable. Your lighting is now ready for use.
